Ablatherm-HIFU Patient Highlights Positive Treatment Experience

Please view using updated link below

October 5, 2009

We are pleased to announce that WRAL-TV (CBS affiliate) in Raleigh, North Carolina recently aired a piece on EDAP's ongoing clinical trial of Ablatherm High-Intensity Focused Ultrasound (HIFU) as a robotized, non-invasive treatment in patients with localized prostate cancer. A patient discusses his positive experience with HIFU treatment and return to normal life after only five months following the procedure.
